## **DETAILED ACTION**

### ***Election/Restrictions***

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

I. Species 1, drawn to an electromagnetic tracking system comprising signal and measurement circuitry which synchronously sample and digitize a drive and sensed signals to form a raw signal matrix, wherein the raw signal matrix is used to determine a mutual inductance measurement, and a processor utilizes the mutual inductance matrix to determine position, classified in class 702, subclass 150.

II. Species 2, drawn to an electromagnetic tracking system comprising signal measurement and conditioning circuitry to sample and digitize signal data, a distorter, and a processor which models the distorter and generating and sensing units, to determine coordinates and orientation of said generating and sensing units classified in class 702, subclass 150.

III. Species 3, drawn to an electromagnetic tracking system comprising signal measurement and conditioning circuitry that includes a common gain stage amplifier, classified in class 702, subclass 150.

IV. Species 4, drawn to an intra-operative imaging and tracking system for guiding a surgical tool comprising a fluoroscope having an x-ray source and a magnetic tracking system comprising a distorter secured against movement relative to the imaging assembly and a processor for modeling the distorter and utilizing images from

Art Unit: 2863

said x-ray source and the modeled distorter data to determine the position of a surgical tool, classified in class 600, subclass 427.

V. Species 5, drawn to an intra-operative imaging and tracking system comprising a fluoroscope having an x-ray source and a magnetic tracking system comprising signal measurement circuitry to measure drive and sense signals to form a mutual inductance matrix, and a processor operative with said matrix and x-ray images to determine the position of a surgical tool, classified in class 600, subclass 427.

VI. Species 6, drawn to an electromagnetic tracking system comprising a distorter having a structure optimal for shielding an object, and a processor operative on sampled and digitized signal data and for modeling the distorter and generating and sensing units, to determine coordinates and orientation of said generating and sensing units, classified in class 702, subclass 150.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 2863

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
